

LONDON METROPOLITAN UNIVERSITY

PROFESSIONAL WORK PLACEMENT

LEARNING LOG

YOUR ID: 22072057

YOUR NAME: Anish Puri

YOUR COURSE: BSc (Hons) computing

YOUR WRL TUTOR: Nishesh Bishwas

PLACE OF WORK (Company Name): Hunchha Digital Pvt. Ltd.

DATES OF ENTRIES IN LEARNING LOG:

Log Index	Start Date	End Date	Company Supervisor Signature
Log 1	26 th June, 2024	4 th July, 2024	
Log 2	5 th July, 2024	14 th July, 2024	
Log 3	16 th July, 2024	23 rd July, 2024	
Log 4	24 th July, 2024	1 th August, 2024	

Log 5	2 nd August, 2024	9 th August, 2024	
Log 6			

LEARNING LOG 5

For the period 2nd August, 2024 to 9th August, 2024

What have I done? (Related tasks to Learning Outcomes)

(LO7) – Basics NodeJs

This week, I developed a basic login and registration system in Node.js, connecting my backend to a MySQL database and ensuring the secure storage of user credentials. I focused on improving the organization of my backend code by implementing best practices, such as separating routes and controllers for better maintainability. Additionally, I integrated the previously built CRUD operations with the frontend, enabling smooth data flow between the client and server.

(LO6) – Tailwind CSS Customization

In this week, I worked on further customizing Tailwind CSS, focusing on creating responsive and tailored designs. I developed custom themes and utilities for my project, optimizing the performance and enhancing the user interface to meet specific design needs. This helped improve the look and feel of my application, making it more user-friendly and visually appealing.

(LO1) – Time Management.

In this week, I effectively managed my time by creating a structured schedule to balance tasks and meet deadlines. I prioritized my workload and focused on completing tasks within the allotted time, ensuring steady progress in both my personal and professional activities. This approach enabled me to stay organized and maintain productivity.

(LO2) – Problem Solving

I demonstrated strong problem-solving skills by addressing challenges encountered during my work on the backend and frontend integration. I sought guidance from colleagues and resources when needed, actively troubleshooting issues related to Node.js and API integration. This approach allowed me to overcome obstacles efficiently and continue progressing with my project.

What I did well (refer to skills used)

Learned Basic Node.js

I successfully grasped the fundamental concepts of Node.js, including server-side scripting, creating APIs, and managing requests and responses. By building small applications and experimenting with basic server setup and routing, I gained practical experience in Node.js. This has not only provided a solid foundation for backend development but has also boosted my confidence in working with asynchronous code and managing server-client communication, which is essential for future web development projects.

Time Management

I effectively managed my time by organizing tasks based on priority and allocating sufficient time for each activity. I adhered to a structured schedule that allowed me to focus on specific tasks without distractions, and I made adjustments when necessary to stay on track. This approach enabled me to complete my tasks on time, avoid last-minute rushes, and balance personal and professional responsibilities. I also used tools like the to-do list app to track my progress and ensure I didn't miss important deadlines.

Tailwind CSS Customization

I enhanced my skills in customizing Tailwind CSS by diving into its configuration and exploring ways to create unique, responsive designs. I learned how to extend Tailwind's utility classes to meet specific project requirements, such as adjusting colors, fonts, and spacing. Additionally, I experimented with creating custom themes and components while optimizing the CSS build for performance, ensuring that the final design was not only visually appealing but also fast and efficient. These improvements allowed me to create user interfaces that were tailored to the specific needs of my projects, elevating the overall user experience.

What I could improve on (i.e. skills I want to improve)

Learning New Technologies (API Integration)

I aim to improve my skills in integrating APIs with React applications, focusing on handling different types of API calls, error handling, and managing asynchronous operations efficiently. This will allow me to build more dynamic and data-driven applications.

React.js State Management

I want to deepen my understanding of state management in React.js, particularly using tools like Redux or React Context, to effectively manage complex state in large applications. Mastering this will help me build more scalable and maintainable React applications.

Problem Solving

I strive to enhance my problem-solving abilities by focusing on breaking down complex issues into smaller, manageable parts, and applying systematic approaches to troubleshoot and find efficient solutions. This will improve my ability to address challenges in both development and debugging.

Action I can take to improve my skills and learning (make these “SMART”):

API Integration

Goal: Master API integration in React.js, focusing on handling different types of API calls, managing asynchronous operations, and ensuring robust error handling.

Action: I will learn how to make GET, POST, PUT, and DELETE requests using `fetch` and `axios`, practice error handling techniques, and integrate APIs in at least two small projects. I will also review the official React documentation and watch tutorial videos to improve my understanding and also will make the hand written documentation for future reference.

Timing: By the end of the Fifth week.

ReactJs State Management

Goal: Gain proficiency in state management using React Context API and Redux to manage application state efficiently in complex React applications.

Action: I will work through tutorials on React Context and Redux, build at least one mini-projects that utilize these state management tools, and practice state management techniques by refactoring existing projects to implement them.

Timing: By the end of my 5th week at the office.

Problem Solving

Goals: Enhance my problem-solving skills by learning how to break down complex issues and apply systematic approaches to debugging and development.

Actions: I will set aside dedicated time each week to practice problem-solving through coding challenges, review solutions to problems encountered in my work, and actively seek feedback on my problem-solving approach from colleagues and mentors.

Timing: By the end of my 5th week at the office.
